

Cloud Identity Minder – Strong Authentication and Self Service for SaaS and Web applications

CionSystems Cloud Identity Minder is a cloud-based identity, authentication and self service user life cycle management solution. Make your application work with any Identity store located anywhere with simple and easy integration to your SaaS, web or traditional application. You no longer need to add special code for each Identity store. The solution provides auditing and workflow as well. Additionally, the application doesn't need to be aware of the Identity store there by allowing Identities to stay within the confine of existing location (on premise or cloud). The solution can be deployed in enterprise DMZ or in the cloud. We have subscription and traditional licensing model with affordable pricing for on-premise and cloud.

CionSystems Cloud Identity Minder's multi factor authentication can be easily integrated with any web or non-web application. Instead of applications managing the strong authentication, developers can offload that functionality to CionSystems Cloud Identity Minder. In addition, this enhances applications' functionality and utility by providing end users with self-passwords reset, profile and account management, and powerful audit capabilities. This greatly reduces the help desk workload. (This functionality can be enabled per feature and per application, greatly enhancing security, consistency, and ease of use.) Users can securely manage their own profile data, so SaaS, internal and web-application need not implement and maintain these elements.

Self-Service can also send alerts and generate reports for:

- Locked Out Users
- Eminent Password Expiration for cloud base, on-premises, LDAP, domain, and other user credentials
- Password resets
- SaaS usage
- Expired User Passwords

Self-Service tracks all activity in an audit log that contain information such as who modified which passwords and when, and from what ip address. Users can update their own personal information (as determined by policy set by system administrators) without helpdesk intervention.

Service providers for billing can also use these reports. Enterprises can utilize the reports for governance, audit, and compliance purposes, as well as, to implement charge backs and track overall usage.

CIONSYSTEMS

Authentication and Self Service

- Strong Authentication Service
- Compliance/Audit Reports
- User Self enrollment
- User lifecycle management
- Allows SaaS and Web application to offload user-management and authentication

Benefits	Features
<p>Supports Microsoft Azure AD, Office 365, Microsoft AD, Red Hat Open LDAP, and Centos Open LDAP, Databases, Google apps, and other ID stores</p> <ul style="list-style-type: none"> • Step up authentication • Keep the Identity in the confines of enterprise • Easy integration point for SaaS, Web and traditional applications • Easily branded and customized • Self Service User self-enrollment and identity lifecycle • Simple to use, powerful workflow • End users can securely reset their passwords and unlock their accounts (User empowerment) • Track all password activity supporting audit, compliance, and reporting • Maintain stronger password policies • Lower your Help Desk workload and reduce operating expenses • Avoid risks associated with promulgating passwords • Provide non-repudiation for high value transactions 	<ul style="list-style-type: none"> • Flexible policy based challenge/response mechanism • User Self Service Password reset • Self Service user registration and account management • Policy based workflows • Users can lock and unlock their account for additional security (vacations, high value accounts, infrequently used accounts) • Password expiry notification • Two factor authentication for step up authentication and authorization • Webservice interfaces and REST APIs for integration with a variety of applications • Audit and usage Reports • Endpoint enforcement • Support multiple tenants from within a single instance • Flexible deployment options

CionSystems Inc. is a leader in Identity and access management solution for both on premise directories and cloud solutions. The company founders and staff have a vast Identity and Security management industry experience with Microsoft and non-Microsoft platform.
