

Cloud SSO

“Cloud SSO, gave us a quick ROI, besides reducing our support burden with many automated functions. It really just works.”

IT Director,
US Federal Agency

Overview

Moving to the Cloud is risky and time consuming. **Move to the Cloud and manage all applications easily and securely with state-of-the-art Cloud SSO.**

Cloud SSO has built in Single Sign-On (SSO), Identity Provider (IDP) with proxy authentication APIs, Self-Service Password Reset (SSPR), Multi-Factor Authentication (MFA), user life cycle management and much more.

SSO for all your legacy apps deployed on premise or in the Cloud.

Hosted either by the customer or on Microsoft Azure Cloud | Amazon by CionSystems on behalf of the customer.

Features

- MFA Protection for Legacy Applications with Stronger Authentication and Password Management
- Policy Creation and Enforcement Engine with Automated Password Expiry Alerts
- Audit and Reporting Logs
- Complete User Life-cycle Management with Self-signup
- One Pane of Glass, Multiple Applications
- Enter Credentials Only Once, Access Many Applications
- SSPR with Multi-Factor Authentication
- Multi-Factor Authentication (MFA) for application login
- Identity Provider (IDP) – Active Directory, OpenLDAP, Azure AD, Office365, Google IDM etc.
- **Proxy Authenticator Connects to Any Directory: AD, Azure AD, OpenLDAP, Office365, Google, Salesforce etc.**
- APIs for SSO integration
