

Active Directory Change Notifier

The **Active Directory Change Notifier** provides invaluable help to administrators wanting to implement proactive policies by notifying in real time of all Active Directory changes on one or more domains.

INCREASE D SECURITY

CionSystems Active Directory Change Notifier e-mails whenever authorized or unauthorized changes are made, minimizing security breaches and assisting you in meeting critical service requirements.

EASE OF USE

Simply by installing the application, specifying the domain(s) and supplying one or more e-mail addresses for the notification process will ensure that your IT organization will be aware of all Active Directory changes.

REDUCED COST

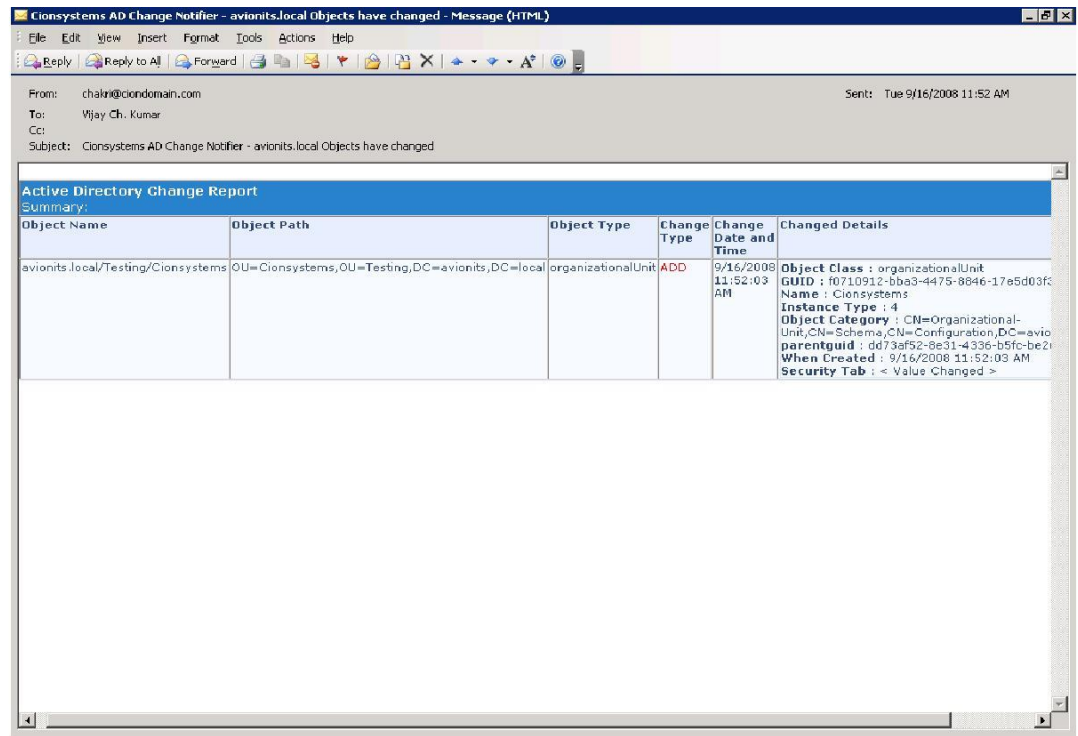

Reduce IT costs by implementing a proactive approach to managing your Directory Services. Be aware of changes when they happen so you can respond right away and avoid security breaches, loss of productivity and critical downtime.

CIOs and IT Directors continually seek to improve the reliability of their Identity and Access management, but most have neither the resources nor the desire to make Active Directory a core competency. However, all Microsoft enterprise applications depend on Active Directory. Therefore, it is vital for IT organizations to make sure their Active Directory infrastructure is running efficiently and seamlessly.

The Active Directory Change Notifier is a flexible, easy to use solution that reports changes to the Directory Services **in real time**. Your Active Directory evolves throughout the day, and being aware of all the changes when they happen should be part of any IT Optimization strategy. This application enables you to work more efficiently and have the detailed knowledge necessary to make critical decisions. Once you configure the application you can rest assured that no changes will occur in the domain's Active Directory without you knowing about it. The Active Directory Change Notifier offers real time help so you can **detect, troubleshoot and quickly resolve Active Directory issues** by outlining what has changed and when.

This application issues comprehensive reports that outline the object, type, date/time and details of what changed. The Active Directory Change Notifier will give you the full picture and eliminate a lot of the guesswork and headaches that come with not knowing when something was modified.

The reports generated by the Active Directory Change Notifier fall in 3 categories: Add, Modify and Delete.

Using this application will increase your efficiency and save you a lot of troubleshooting time.

For example- losing several mailboxes could mean lost revenue, potentially business crippling downtime and certainly loss of productivity. By using this application and employing a proactive Active Directory management policy, you'll be made aware of the change that caused the problem right away, and can repair or restore the objects- minimizing or avoiding altogether an interruption in your business process.

To increase the flexibility and ease of deployment in any environment, the Active Directory Change Notifier can be installed anywhere on your domain. It does not need to be installed on a Domain Controller or directly on the Active Directory.
