Active Directory Recovery

The **ActiveDirectory Recovery** provides invaluable help to administrators wanting to securely back up, recover or granularly restore AD objects on one or more domains.

KEY FEATURES

• Web-based, easy to use

• Automated backups

• Comprehensive recovery

• Scheduling for off-peak backups

• Forced backup

• Robust search functions

• Browse backups and AD tree

• Support for multiple domains

• GPO backup and restore

• Un-delete objects

• Attribute-level restore

• Disaster recovery

KEY BENEFITS

• Reduce Costs and Increase

  Productivity

• Extend the Windows Server

  Native Tools

• Enhanced Comparison Reporting

• Virtually no downtime

• No scripts
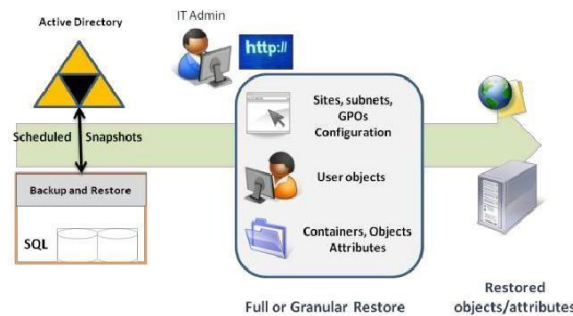

• Backup Active Directory Domain

• Recover Active Directory Domain

• Active Directory Disaster Recovery

• Identify Changes in Active Directory

• Granular restore of the objects and

attributes

Active Directory (AD) disasters such as unwanted schema extensions or an irreversible corruption of the database can plague companies regardless of size. These disruptive events result in unplanned downtime causing business critical applications such as Exchange, Sharepoint, financial or CRM databases or to be unavailable for hours or days. Other disruptions caused by human error, hardware or software failures can also corrupt your AD, configurations or Group Policy data. Objects in AD can often be modified or deleted by mistake or through a malicious act. Erroneous scripts can overwrite AD attributes. Just one of these events will significantly impact your organization's productivity and the company's bottom line.

CionSystems offers an easy-to-use web-based solution for fast, online recovery. Active Directory Recovery Manager empowers you to recover from inadvertent deletions or changes in seconds, not hours. The online, granular restore capability allows you to recover without taking AD offline. In-depth comparison reports highlight w hat objects and attributes have changed or been deleted in Active Directory. This allows IT administrators to conduct efficient, focused recovery at the object or attribute level. Having accurate backups and fast recovery enables you to reduce the time and costs associated with AD outages and decrease the impact on end users.

In the event of a disaster, the Active Directory Recovery Manager from CionSystems quickly restores your domain(s) to a point before the corruption occurred. By selecting unaffected backups, this application greatly reduces your downtime.

The Active Directory Recovery Manager provides unique advantages and benefits:

Online Restore including GPO

Objects or attributes are restored without needing to restart domain controllers (DCs). This eliminates downtime for users who are logged on to the network.

Robust Recovery Options

CionSystems offers restore of any object in AD, including GPO's, users, groups, computers, organizational units (OUs), sites, subnets, configuration and Exchange storage groups. This feature allows IT organizations to restore data with virtually zero downtime.

Attribute Restore

Active Directory Recovery Manager can restore individual attributes, such as account settings, group memberships and binary attributes, even when the object itself has not been deleted. Administrators can easily restore only the required attributes.

Comparison Reports

Comprehensive reports allow IT administrators to compare different backups and highlight changes made to the data since the backup. The reports display the objects that were deleted or changed, and specific attributes.

Remote Restore

High-availability plays a key role, and with Active Directory Recovery Manager administrators can perform restores remotely.

Efficient Active Directory and Group Policy backups

This application allows administrators to back up AD efficiently, making it possible to back up several times a day while reducing the storage space needed.

Scalable, Flexible Backups

CionSystems helps by providing a centralized management of System State backups for DCs, thus minimizing bandwidth needs. The Active Directory Recovery Manager will scale up to any infrastructure size.

Full Automatic Backups

IT administrators can schedule backups for off-peak hours allowing you to backup more often.

Disaster Recovery

Active Directory Recovery Manager allows exporting and importing of backup snapshots for a quick recovery in case of an unforeseen disaster.

Reduce Costs while Increasing Productivity

Accurate backups and fast recovery enables IT administrators to reduce the time and costs associated with downtimes and increase end-user productivity.

Take the next step

Active Directory management is critical to your organization's productivity. Make sure you are in control of your network. CionSystems products can help you achieve maximum productivity and streamline your processes. Contact us today for an in-depth analysis of your Active Directory needs, or visit us at www.CionSystems.com for more info.
