

Case Study: Education Vertical

WHAT IS AD Guardian?

A Complete Suite for Managing Identity Access and Authentication (AD) for Enterprises.

Provides all aspects of Management, Self-Service for a variety of operations including: Self-Service Password Reset (SSPR), Change Management, Disaster Recovery, Group Policy Objects (GPOs) and a Deep Insight into Complex Microsoft Active Directory (AD) Information.

Easily Harden the Most Important part of your Infrastructure and Protect your Enterprise from Hacks, ID Theft, Loss of Critical Data, etc.

One Solution Manages ALL Enterprise AD Activities!

"With AD Guardian, we were able to reduce administrative accounts by 80% and harden and enhance security."

- District IT Director, WA

WA School district

- Over 175,000 User Accounts spread over Multiple Domains
 - Users Consist of Staff, Current & Past Students, Vendors, Contractors, Parents
 - Each group was governed by different policy requirements
- District-Wide Initiatives Mandated Privacy and Security
- Looked for a Solution that would Support District Policies, Initiatives, and Industry Best Practices, including Delegation, Provisioning, Workflow, Management, Reporting and Auditing
- Needed a Centralized Administrative and Management Tool
- Required to be Simple, Automated, and Integrated with Existing District Applications
- Easy-to-Use Group Policy Management and disaster recovery
- Easy-to-Use AD portal with restricted rights and delegation

The Problem

- Rudimentary Tools Necessitated Too Many High Privileged Accounts Accessing Active Directory
- Workload Required Delegating Some of the Administration to the Helpdesk
- Low-level Administrators were Making Direct Changes to AD Without Tracking or Audit Trails
- Provisioning and Administration was Tedious, Cumbersome, Prone to Errors, and Time-Consuming
- Compliance and security Issues with Major Turnover in Short Bursts Requiring Many Manual Labor-Intensive Man-Hours Resulting in Many Mismatched AD Object Relationships
- Lacked Self-Service Capabilities for Passwords and User Life Cycle
